

In this worksheet, you will learn how to apply trigonometric ratios to angles beyond  $90^\circ$ . You will practise reducing large and negative angles, determining coterminal angles, finding reference angles, and evaluating trigonometric functions using these concepts.

## Easy Questions

1. Determine the quadrant in which the terminal side of the angle  $135^\circ$  lies.
2. Find the reference angle of  $150^\circ$ .
3. Using the concept of reference angles, evaluate  $\sin(210^\circ)$ .
4. Evaluate  $\cos(-30^\circ)$ .
5. Explain why  $\tan(270^\circ)$  is undefined.

## Intermediate Questions

6. Find the values of  $\sin(225^\circ)$ ,  $\cos(225^\circ)$  and  $\tan(225^\circ)$ .
7. Evaluate  $\sin(300^\circ)$  and  $\cos(300^\circ)$  exactly.
8. The angle  $405^\circ$  is given. Reduce it to an equivalent angle between  $0^\circ$  and  $360^\circ$  and then evaluate  $\sin(405^\circ)$ .
9. Express  $\cos(-150^\circ)$  in terms of a cosine of a positive angle and evaluate it.
10. Sketch the terminal side of  $135^\circ$  on the unit circle and label the coordinates of the point where the terminal side intersects the circle.
11. Determine the reference angle of  $135^\circ$  and then evaluate  $\tan(135^\circ)$ .
12. Express  $\sin(-210^\circ)$  as the sine of a positive angle and evaluate it.
13. Calculate  $\cos(720^\circ + 30^\circ)$ .
14. Compute  $\sin(810^\circ)$ .
15. Find the value of  $\sin(-420^\circ)$ .
16. If  $\theta = 390^\circ$ , reduce it to an equivalent angle between  $0^\circ$  and  $360^\circ$  and then evaluate  $\cos \theta$ .

17. Show that  $\sin(180^\circ + 30^\circ) = -\sin(30^\circ)$  by drawing the appropriate unit circle diagram.
18. Evaluate  $\tan(-135^\circ)$ .
19. For  $\theta = -600^\circ$ , find a positive coterminal angle between  $0^\circ$  and  $360^\circ$  and then compute  $\cos \theta$ .
20. Determine  $\sin(510^\circ)$ .

## Hard Questions

21. Show that  $\cos(360^\circ - \theta) = \cos \theta$  for  $\theta = 150^\circ$  by computing both sides and discussing the result.
22. A rotated angle is given by  $-735^\circ$ . Find a coterminal angle between  $0^\circ$  and  $360^\circ$  and then evaluate  $\tan$  of this angle.
23. Given  $\theta = 1230^\circ$ , determine its reference (acute) angle and state whether  $\sin(\theta)$  is positive or negative.
24. Compute  $\cos(-1125^\circ)$  by finding its equivalent angle between  $0^\circ$  and  $360^\circ$ .
25. Evaluate  $\tan(405^\circ - 720^\circ)$  by first simplifying the angle.
26. For  $\theta = -845^\circ$ , determine a positive coterminal angle and then compute  $\cos \theta$ .
27. Draw the terminal side of  $260^\circ$  on a unit circle and label the coordinates of the intersection point.
28. If an angle  $\theta$  satisfies  $\sin \theta = -0.5$  and it is given that  $\theta$  does not lie in the third quadrant, determine all possible values of  $\theta$  between  $0^\circ$  and  $360^\circ$ .
29. For  $\theta = 670^\circ$ , determine the reference angle and then evaluate  $\cos \theta$ , explaining the sign based on the quadrant in which the terminal side lies.
30. A beam of light rotates through  $-810^\circ$ . Find the positive coterminal angle and then determine  $\sin$  of the resulting angle.
